LIFE-Solid

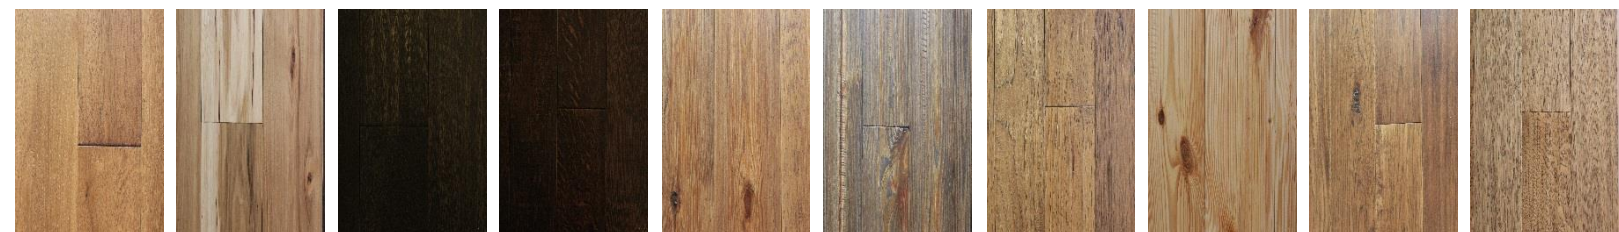

OUR LIFE-SOLID ENGINEERED WOOD FLOORS PROVIDE UNSURPASSED STABILITY WITHOUT SACRIFICING THE BEAUTY OR QUALITY OF REAL WOOD FLOORING. THE SAWN FACE PRODUCES BOTH THE EXACT SAME VISUAL AS A SOLID PIECE OF WOOD FLOORING AND NECESSARY THICKNESS TO SAND AND REFINISH IF EVER DESIRED. THE ENGINEERED CONSTRUCTION PROVIDES THE STABILITY TO CREATE OUR UNIQUE VISUALS ON A WIDER CANVAS. WHILE OUR COLLECTIONS AND INDIVIDUAL PRODUCTS ARE NAMED TO REFLECT THE HERITAGE AND HISTORY OF OUR HOME STATE OF GEORGIA, OUR FLOORS CAN BE USED WHEREVER LIFE TAKES YOU.

LIFETIME FINISH: Our lifetime finish warranty provides peace of mind in knowing you've selected a floor that is quality built and will stand up to years of use. We utilize a 7-layer proprietary finish process with Aluminum Oxide for increased wear resistance and a stain and scratch resistant Nano Technology top coat for lasting beauty.

INSTALLATION OPTIONS: The ½" thick-engineered construction allows you to install our floors on, above or below grade. The alternating 8-ply construction provides increased dimensional stability, less expansion and contraction which all equal worry free installations. Our products can be glued, nailed, stapled or floated.

FASHION FORWARD: Our flooring features leading edge visuals, texture and color with a commitment to quality and individuality. Combining these features with wide width planks and longer length boards gives you an aesthetically pleasing visual in traditional to rustic decors.

ENVIRONMENTALLY FRIENDLY: Our production process and species selections all focus on sustainability. We only use non-endangered woods and are producing 4 to 5 times more flooring out of the same lumber normally used to produce one piece of ¾" solid hardwood flooring. Furthermore, our flooring products comply with CARB Phase 2 and have been certified under FloorScore® and GREENGUARD Gold standards.
